

## Commander's Introduction to LOGSA

As Commander of the USAMC Logistics Support Activity, I would like to welcome you to our organization. Our focus today -- and beyond 2020 -- is the successful strategic Transformation and Readiness support to our Armed Forces. Our homepage provides valuable insight into our organization, and is a means of letting you access a wealth of logistics information. As a result of developing logistics systems and other defense changes, LOGSA is a DoD Center of Excellence for integrated logistics data. LOGSA is a dynamic organization dedicated to providing integrated world-class logistics information and support for America's warfighters. As a valuable asset of AMC, our personnel accomplish their mission with a single focus -- support the warfighter.

Our operation is state-of-the-art in a rapidly changing data integration environment. You are encouraged to explore our homepage, and visit our web-based logistics product pages, to include WEBLOG, to obtain data on a wide range and variety of logistics information products and services through the power of the latest information technology. The dynamic LOGSA Logistics Integrated Data Base (LIDB) provides the technical framework for us to leverage technology with the goal of improving our support to you. Critical readiness tools are available today to plan and participate in any contingency operation.

We provide the warfighter with valuable logistics management and materiel readiness support. Our workforce of over 500 soldiers, civilians, and contractors are dedicated to providing you with the best possible tools, techniques, and logistics products and services that will enhance your readiness posture. To complement your capabilities, we employ temporary travel to deliver timely and effective training and assistance to military personnel and units operating around the globe. Our readiness information enables us to make significant contributions as our Army transforms into a network-centric force that is lighter and more mobile, but which retains the lethality of our current, heavier forces. If you have a question, comment, or concern, I invite you to contact us.
